Hand and Arm Function Study

The University of Washington is seeking volunteers to help us develop a new measure of hand and arm function. We want to learn how difficulty with hand(s) and/or arm(s) may affect your daily life. We also want to learn about the best ways to measure hand and arm function in people with certain neurological conditions. The purpose of this study is to develop a new hand and arm function measure. If our study is a good fit for you, you will be asked to be in a small group discussion and/or try some tasks using your hands and arms. We will give you \$35 and parking reimbursement if you choose to participate in this session.

We are looking for people who:

- 21 years or older.
- Any **one** of the following diagnoses: stroke, traumatic brain injury, multiple sclerosis or Parkinson disease.

If you are interested in more information, please contact Namrata Grampurohit 206-353-6054 or E-mail: namot@uw.edu*

*Please note: We cannot guarantee the confidentiality of any information sent by e-mail.
